SUMMARY

Analytics leader with 6+ years of experience driving data-informed product and business decisions across marketplace, gaming, and mobility platforms. Track record of owning end-to-end analytics strategy from defining KPI frameworks, data modeling and designing experiments to sizing financial impact and influencing leadership on high-stakes trade-offs decisions. Experienced in building scalable measurement systems, standardizing experimentation platforms, and partnering cross-functionally with Product, Engineering, and Operations to turn ambiguous business problems into structured, actionable insights. Seeking Lead analytics roles where I can combine deep analytical craft with strategic influence and team mentorship.

TECHNICAL SKILLS

Analytics Leadership: KPI Framework Design, Experiment Strategy & Governance, Financial Impact Sizing, Stakeholder Influence, Cross-functional Analytics Partnership

Methods: A/B Testing & Experimentation, Causal Inference (DiD, Quasi-experiments), Statistical Modeling, Segmentation, Root Cause Analysis, Forecasting

Tools: Python (Pandas, Scikit-learn, Matplotlib), SQL (PostgreSQL, Presto, Snowflake, MySQL), Looker, Tableau, Metabase, AWS Athena

Data Infrastructure: Airflow, PySpark, Event Instrumentation & Validation, ETL Pipeline, Dbt tools, data modelling

AI & Productivity: LLM-based Operational Systems, Claude, Cursor, GitHub Copilot (applied to analysis acceleration & experimentation support)

EXPERIENCE

Deliveroo (acquired by DoorDash, 2025)

June 2024 – Present

Senior Data Analyst (Care)

Bengaluru, KA

- Owned end-to-end analytics strategy for a high-impact Care policy change (removal of photo evidence in Missing Item claims), independently designing the experiment framework, building financial impact models, and presenting trade-off analysis to leadership, projecting +4pp B10 incidence, +1.2pp CSAT uplift, and £2.9M annual gross compensation impact.
- Led the measurement and analysis for replacing flat-rate compensation with LLM-estimated item values, quantifying £2.1M annual GTV uplift, 10.2% reduction in support contacts, and 2.88x ROI on compensation spend, directly influencing the go/no-go decision.
- Drove analytics for LLM-based validation rules to prevent illogical claim combinations, sizing £283K annual cost savings and 1.68ppt claim rate reduction without CSAT degradation.
- Defined and standardized key experimentation platform metrics across the Care organization, enabling consistent measurement, improved decision clarity, and faster experiment cycles across all lines of business.
- Served as the primary analytics partner to Product and Engineering, delivering structured cost-sizing analyses and financial trade-off frameworks that informed roadmap prioritization decisions.
- Evaluated and proposed simplification of multiple care policies such as designing standardized lateness thresholds for late order policies and tiered compensation structures to balance customer satisfaction against cost control.

Junglelee Games

Aug 2022 – May 2024

Associate Data Scientist (Product)

Bengaluru, KA

- Built an early-behavior-based high-value player prediction framework to support targeted engagement strategies, improving retention by 3%.
- Developed an IPL Auto Team Suggester using historical performance data to streamline user decision-making and improve contest participation.
- Analyzed skill vs. chance dynamics in casual games (Ludo, Teen Patti) to provide evidence-based recommendations for game design and product strategy.
- Implemented structured event validation through data modeling and analytics ETL pipelines, reducing critical clickstream issues by 20% and improving data reliability across large-scale user sessions.
- Led experiment analysis for new product features, delivering 10% lift in conversion and 5% reduction in churn, while automating KPI reporting to improve stakeholder visibility.

Rapido

Jan 2021 – Aug 2022

Senior Data Analyst

Bengaluru, KA

- Drove customer engagement optimization by identifying high-potential subscription segments using RFM analysis and geo-temporal rider profiling, enabling targeted push and in-app campaigns.
- Delivered subscription demand forecasts and built automated KPI tracking pipelines using Spark and Airflow to improve reporting efficiency and operational visibility.

Bounce Bikeshare

Nov 2019 – Jan 2021

Decision Scientist

Bengaluru, KA

- Analyzed demand patterns to identify optimal bike redistribution clusters, improving operational efficiency and asset utilization within clusters.
- Developed cross-platform data reporting solutions to enhance visibility into key operational metrics and support strategic decision-making.

Melayer Software Solutions Pvt. Ltd.

May 2018 – Oct 2019

Analyst

Pune, MH

- Analyzed website traffic and user acquisition metrics using Google Analytics to inform marketing performance decisions.

EDUCATION

MTech in Artificial Intelligence and Machine Learning (WILP)

2025 – 2027

BITS pilani
